git工作流图文教学

- 1. 通过 git clone 命令拉取远程master仓库到本地后
- 2. 可通过命令行复现操作或直接通过pycharm软件实现,本次图文以pycharm为例

- 操作的核心是保证origin(远端)master分支的正确性
 - feat/分支可任务是属于个人分支,在一个人使用这个分支的情况下,当你执行本地 feat/分支push 远端 feat/分支的时候,是不会出现冲突的,只有在合并master的时候,若有人先一步把个人分支合并到master分支后,才会出现冲突,只需拉取最新的master更新,然后让master和你修改代码即个人分支合并后,再提交即可解决冲突
